

# PREECLAMPSIA

## PREECLAMPSIA VS ECLAMPSIA

Preeclampsia can lead to eclampsia, a serious condition that can have health risks for mom and baby and, in rare cases, cause death. If your preeclampsia leads to seizures, you have eclampsia.

## SWELLING OR HIGH BP DURING PREGNANCY?

### HERE'S WHAT YOU NEED TO KNOW

Preeclampsia, formerly called toxemia, happens when you're pregnant, the symptoms include sudden weight gain because of increase in bodily fluids, shoulder and belly pain, severe headaches, change in reflexes or mental state

## Treatment and Management of Preeclampsia

● **Treatment:** A preterm delivery, usually at 37 weeks, is the only known treatment of preeclampsia and an effective prevention of potentially fatal complications.

● **Management:** Women with mild preeclampsia or at less than 37 weeks of gestation can often delay preterm delivery with close monitoring and bed rest.
